Code deploy service installed in EC2

```
Checking if there is already a process named codedeploy-agent running.

  Installing       : codedeploy-agent-1.8.1-26.noarch
  Running scriptlet: codedeploy-agent-1.8.1-26.noarch

post hook : 1
Check if there is a codedeployagent config file.
Start codedeploy-agent in post hook if this is a first install.

  Verifying        : codedeploy-agent-1.8.1-26.noarch

Installed:
  codedeploy-agent-1.8.1-26.noarch

Complete!
I, [2026-02-25T05:36:00.401827 #26009]  INFO -- : Update check complete.
I, [2026-02-25T05:36:00.401864 #26009]  INFO -- : Stopping updater.
[root@ip-172-31-33-247 ec2-user]# sudo service codedeploy-agent start
Starting codedeploy-agent:[root@ipsudo service codedeploy-agent statusce codedeploy-agent
The AWS CodeDeploy agent is running as PID 26139
[root@ip-172-31-33-247 ec2-user]#
```

IAM role created for EC2 role attach

IAM > Roles > Create role

Step 3
Name, review, and create

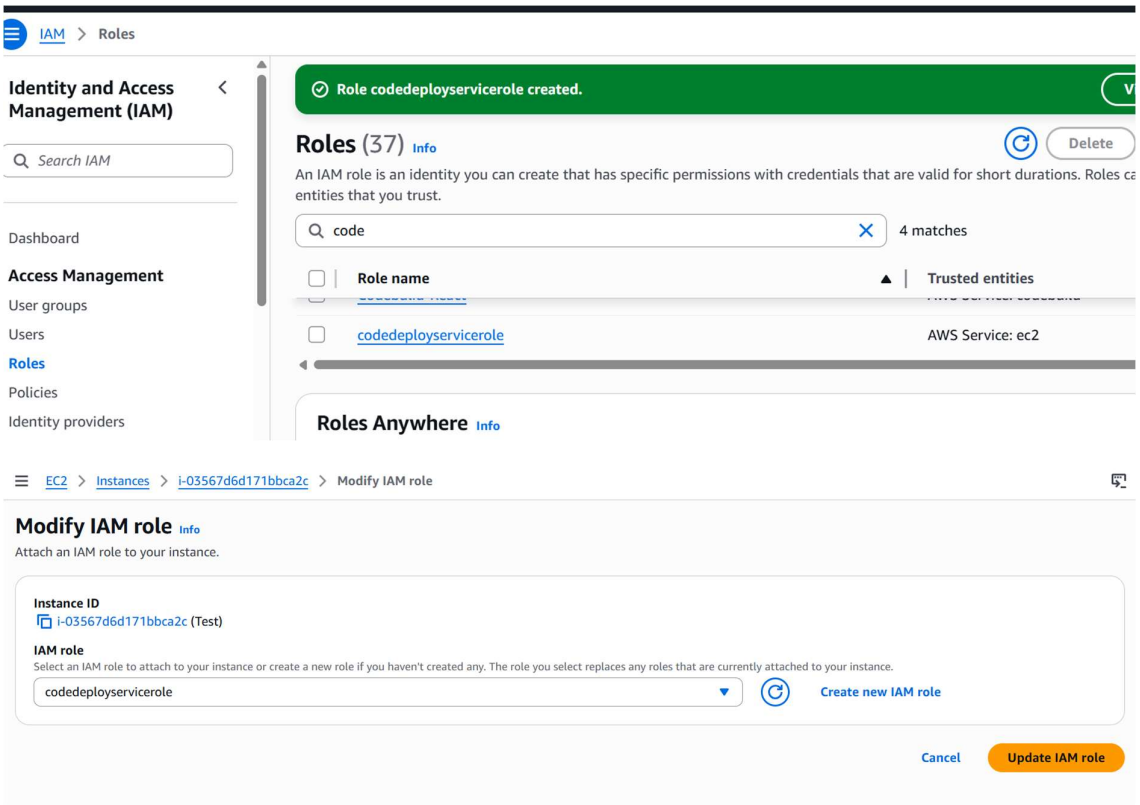
- **AWS service** — Allow AWS services like EC2, Lambda, or others to perform actions in this account.
- **AWS account** — Allow entities in other AWS accounts belonging to you or a 3rd party to perform actions in this account.
- **Web identity** — Allows users federated by the specified external web identity provider to assume this role to perform actions in this account.
- **SAML 2.0 federation** — Allow users federated with SAML 2.0 from a corporate directory to perform actions in this account.
- **Custom trust policy** — Create a custom trust policy to enable others to perform actions in this account.

Use case

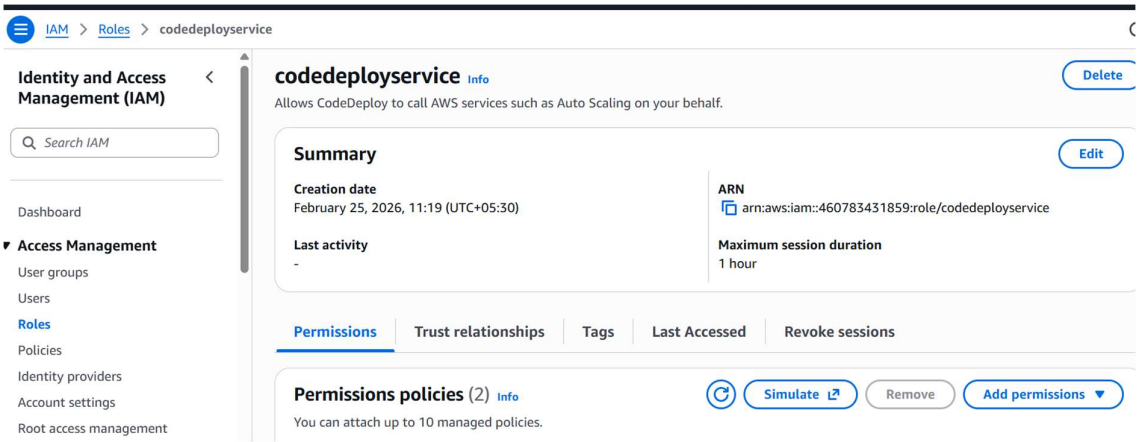
Allow an AWS service like EC2, Lambda, or others to perform actions in this account.

Service or use case

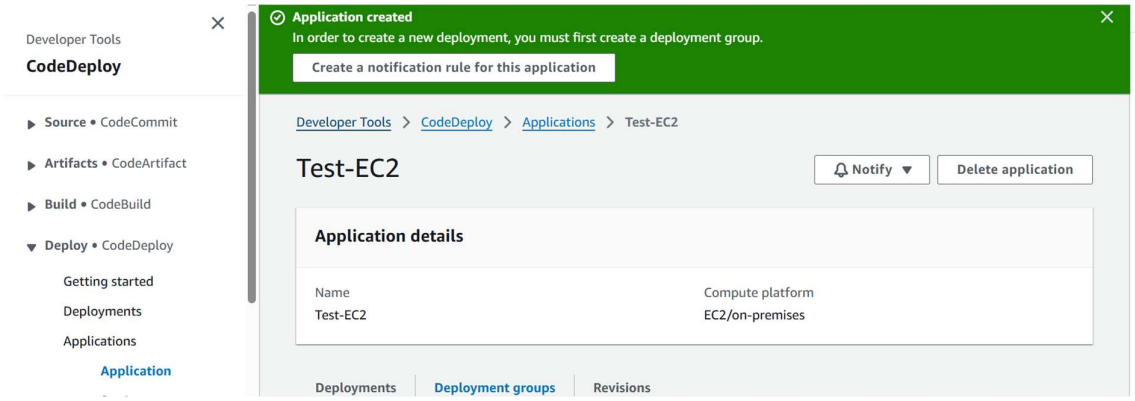
EC2

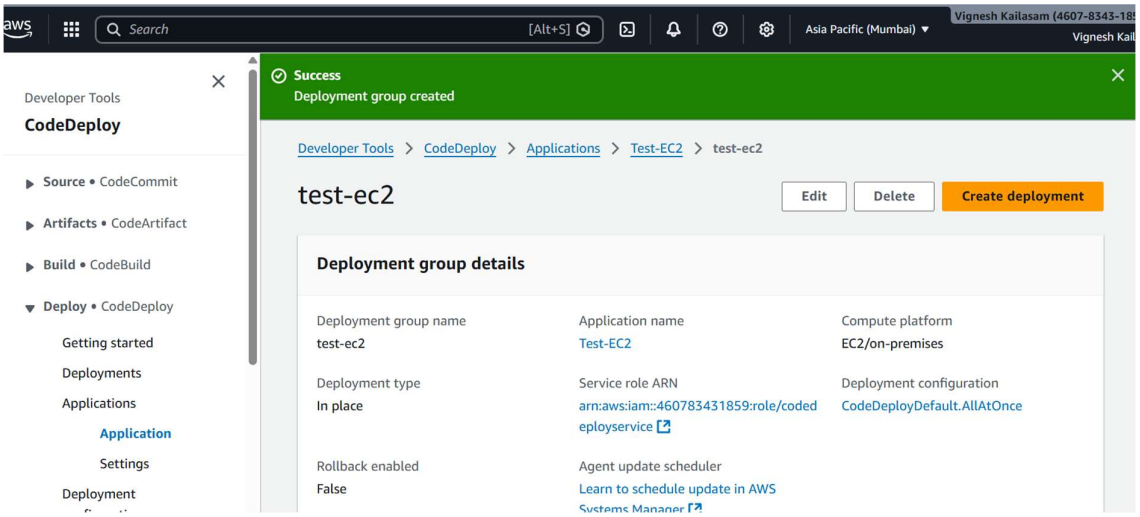


IAM role created for Code deploy

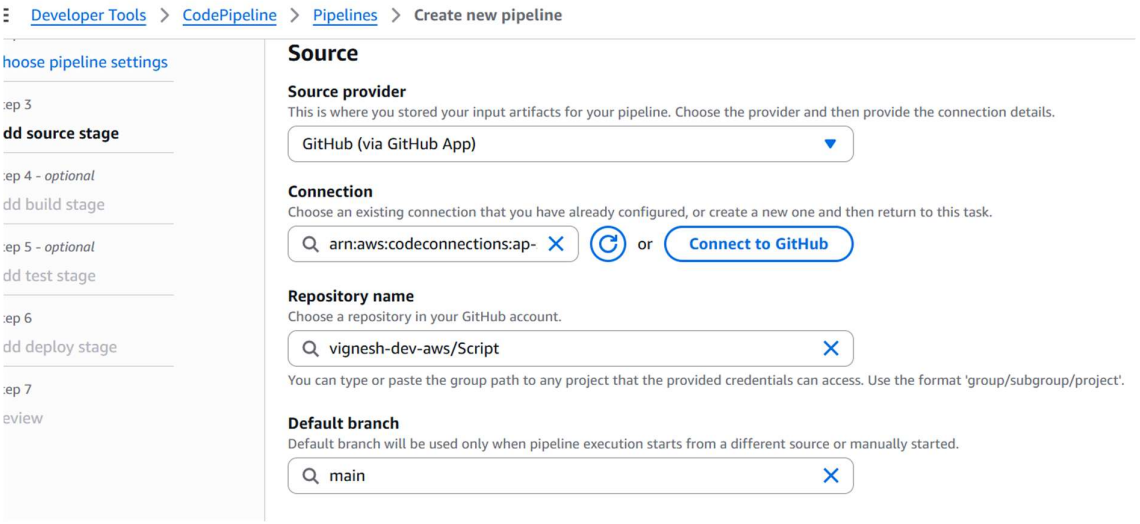


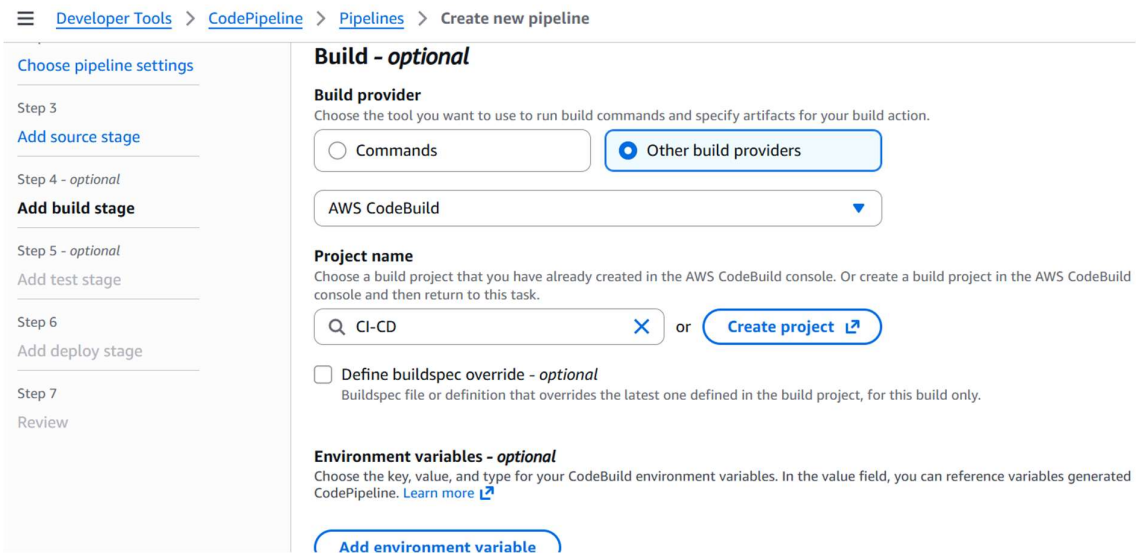
Code deploy succeeded

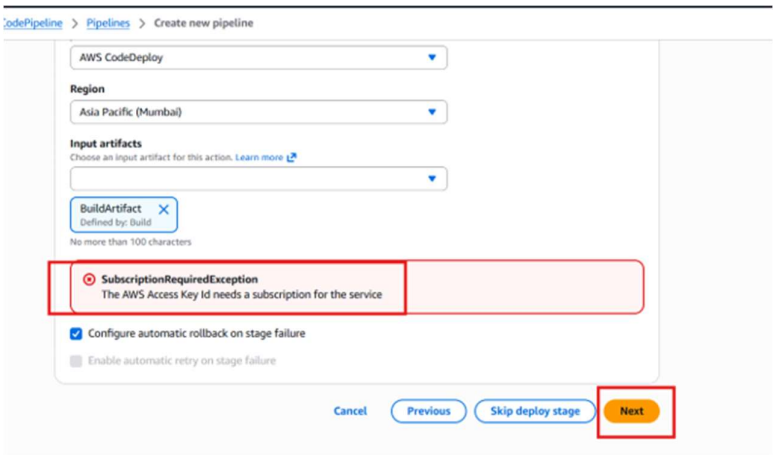




Created pipeline







Note: Due to subscription require for paid version to complete the pipeline.
